

Code for Responsible Trapping

During trapping operations, trappers should:

- show compassion for the animals they capture;
- develop skills so that furs are properly prepared for market;
- know and practice proper releasing and killing methods;
- record all trap-set locations and captures of fur-bearers;
- dispose of animal carcasses properly; and
- report the presence of diseased animals to a district Fish and Wildlife office.

Trappers are encouraged to:

- make sets that are designed to capture only the intended species of fur-bearer;
- make only as many sets as they can manage effectively;
- anchor traps or snares securely to hold the largest animal that they may catch; and
- install a centre-mounted, swivelling, short chain (no longer than 30 cm, or 12 in, equipped with a shock absorber) for land foothold trap sets that are solidly anchored.

Humane Trapping

Fur-bearing animals must be trapped using methods that are proven to avoid unnecessary pain and suffering. The manner in which animals are trapped is a concern of many Albertans, including trappers. Those who follow the Code for Responsible Trapping will help to ensure that the harvest of this resource is done in a way that is socially acceptable.

Agreement on International Humane Trapping Standards (AIHTS)

The *Agreement on International Humane Trapping Standards* (AIHTS) came into force in Canada on June 1, 1999. It is a binding agreement between the European Union (EU), Canada and Russia. The United States and the EU have signed a similar commitment, which unifies the North American wild fur market. Canada signed the AIHTS only after careful consultation with trappers, provincial and territorial governments and fur industry representatives. Alberta has agreed to implement the AIHTS standards. Implementation is an ongoing process, and trappers will be kept informed of any new developments.

The AIHTS:

- Allows for continuing export of wild fur products into the EU.
- Commits all parties to applying the AIHTS standards to all trapping, including commercial use.
- Supports further research and testing for the ongoing improvement of trapping devices.
- Provides for other elements such as product certification, trap certification and trapper education.

- Will allow for the use of jaw-type leg/foothold restraining traps in submersion sets for semi-aquatic fur-bearers.
- Allows for the use of design-approved snares.
- Allows for the use of traditional wooden dead-fall traps.
- Prohibits the use of all jaw-type leg/foothold restraining traps (including padded traps) on land for badger, beaver, ermine, fisher, marten, muskrat and otter. Alberta adopted similar legislation for these species, and others before the AIHTS became effective.
- Prohibits the use of conventional steel-jawed leghold restraining traps on land for bobcat, coyote, lynx, raccoon and wolf.

It should be noted that the adequacy of trapping devices must be properly tested. The Fur Institute of Canada (FIC) has taken the lead role in this regard. Killing and restraining traps that have undergone testing to meet AIHTS requirements and certification are outlined below and also listed on the FIC website: www.fur.ca

Certified Traps - AIHTS Implementation

The following lists show the two phases for regulating species-specific traps: (1) the *certified traps regulated for specific species*; (2) *certified traps that are not regulated at this time*. The traps listed by name have all been certified by a governing competent authority as meeting the requirements of the AIHTS for specific species.

Updated January 1, 2023. For the most current list, please see <https://fur.ca/certified-traps/>

Phase 1 – KILLING TRAPS - Certified Traps currently regulated for use per species:

Regulatory Requirements for the Use of trapping Devices

- Foothold traps with toothed jaws or an inside jaw-spread of 23 cm (9 in.) or more may not be used to trap fur-bearing animals.
- Foothold traps that are not set as killing devices may not be used in trees or on poles.
- Foothold traps, that are not set as killing devices, may not be used to harvest fur-bearers other than bobcat, coyote, fox, lynx or wolf. Other fur-bearing species must be taken in a killing device or in a live-trap set to capture the animal by holding it in a container (see pages 10-13).
- Foothold traps that may be used for trapping bobcat, coyote, fox, lynx or wolf include traps manufactured or modified to have one or more of the following features: (i) Laminated jaws – 2 steel parallel jaws that are at least 8 mm thick, (ii) Offset jaws – jaws that do not touch over their full length when closed on each other, or (iii) Padded jaws – jaws designed or modified to prevent any metallic surface from contacting the animal.
- Traps that are not killing devices must be checked at least once every 48 hours if set under the authority of a Registered Fur Management Licence, or at least once every 24 hours if set under the authority of a Resident Fur Management Licence.
- Snare devices, including neck snares, power snares and foot snares, may only be set for the taking of fur-bearing animals under the authority of a Registered Fur Management Licence or — by holders of Resident Fur Management Licences for bobcat, coyote, fox, squirrel or wolf (provided they meet the requirements listed in this section) and for beaver (provided the snare loop is completely under water).
— by residents for rabbit or hare on lands to which they have right-of-access (provided the snare wire is not larger than 20-gauge and the snare loop is not more than 13 cm (5 in.) in diameter).
- Slide-wire sets must be equipped with a lock. The slide-wires and weight must be properly anchored, and set in water that is deep enough to ensure that the largest animal that may be captured will be totally submerged.
- Neck snares must be equipped with a locking device that is designed and set to prevent the snare loop from loosening again after it has tightened on the neck of the fur-bearing animal, except when made of a single strand of wire, set to capture squirrel, rabbit or hare.

It should be noted that raccoon and skunk are classed as non-licence animals and may be hunted or trapped (see page 21 for these provisions). Traps meeting requirements of the Agreement on International Humane Trapping Standards for raccoon are outlined on page 11.

Additional Regulations

No one may remove, damage, spring or in any way interfere with traps set by another person for the taking of fur-bearing animals. (Exception: Holders of Registered Fur Management Licences may remove traps or snares found within the limits of their trapping areas if they are set unlawfully. Any such removal must be reported immediately to Alberta Forestry and Parks.)

It is unlawful to:

- use traps that do not meet the requirements of the AIHTS;
- use a poison or drug for taking a fur-bearing animal, except as authorized by the *Agricultural Pest Act*;
- use sharp hooks or similar devices to capture fur-bearers; or
- trap in a wildlife sanctuary. Please refer to the map for locations of these sanctuaries. Some exceptions exist for Registered Fur Management Areas – RFMAs, (for further information, contact the nearest Fish and Wildlife District Office – see page 6);
- harvest fur-bearing animals within 100 metres of Highway 1A in WMU 410, except with the use of traps;
- carry a weapon on an OHV **between 1 hour before sunrise and the following noon** during an open season for big game* on public land in the following WMUs: 400-446. This does not apply to a person who is traveling on a direct route to or from a location accessible by vehicles designed for highway travel and his or her isolated campsite, and the weapons and ammunition are carried out of view in separate locked containers (and remain locked during the trip). This prohibition does not apply to persons hunting on privately owned lands, and it does not apply to those trapping under the authority of a Registered Fur Management Licence or a Resident Fur Management Licence.

Natural Areas and Ecological Reserves

In Alberta, special parcels of public land, such as natural areas and ecological reserves, have been set aside for conservation purposes. Trapping is prohibited within ecological reserves. For information about ecological reserves and natural areas, contact Parks Operations Division, Forestry and Parks in Edmonton at 780-427-3582 (toll-free 1-866-427-3582).

Fur Handlers

A person may skin and prepare another person's furs for market, provided the handler maintains on premises records for inspection purposes. These records no longer have to be submitted to the Hunting and Fishing Branch. If you have specific questions contact a Fish and Wildlife District Office (see page 6).
